                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-apoptotic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH function, an agent that modulates a HERPUDI function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-AP in a cell, for treating a POSH-associated disease in a subject. The

The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquith ligase (b). Methods using (l), (a) or (b) are useful for identifying a agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits trafficking or progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH cused for treating a viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated disease is viral infection, POSH-associated cancer or treating or preventing POSH-associated methods are useful for treating POSH-associated meurological disorder. The methods are useful for treating POSH-associated meurological disorder in a subject treating or preventing POSH-associated meurological disorder in a subject endicophrenia. Niemann-Pick's disease, Huntington's disease, schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide and

The invention relates to an isolated, purified or recombinant complex (I) comprising a PoSH polypeptide and a PoSH-associated protein (PoSH-AP) (a) or HBRFUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a poSH polypeptide or PoSH-AP, for identifying an antiviral agent, an anti-apoptotic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a PoSH function, an agent that modulates a HERPUDI function. The methods can be useful for treating a viral infection, for inhibiting an activity of a PoSH-associated disease is viral infection, PoSH-associated cancer or PoSH-associated disease is viral infection, PoSH-associated cancer or PoSH-associated neurological disorder. The methods are useful for treating or preventing PoSH-associated neurological disorder in a subject eg. Alzheimer's disease, Parkinson's disease, Huntington's disease, ceg. Alzheimer's disease, Parkinson's disease, Huntington's disease, corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide POSH-associated protein (POSH-AP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 51; 374pp; English.

The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or (B) are useful for identifying an agent that modulates an activity of a poSH polypeptide or POSH-AP, for identifying an anti-viral agent, an anti-cancer agent, an activity of a notice apoptedic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits trafficking progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH function, an agent that modulates a HERPUDI function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-ABSOCiated disease is viral infection, POSH-aBSOCiated cancer or POSH-aBSOciated neurological disorder. The methods are useful for treating or preventing POSH-aBSOCiated neurological disorder. The methods are useful for treating or preventing POSH-aBSOCiated neurological disorder. The methods are useful for treating or preventing POSH-aBSOCiated neurological disorder in a subject e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, Barkinson's disease, Huntington's disease, Barkinson's disease, Huntington's disease,
                                                                                                                                                                                                                                                                                                            and
                                                                                                                                                                                                                                                                          antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide POSH-associated protein (POSH-AP).
                                                                                                                                                                    Tuvia
                                                                                                                                                                    Ben-Avraham D,
                                                                                                                                                                    Yaar L,
                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 49; 374pp; English.
                                                                                                                                                                  Υ,
                                                                                                                                                                  Reiss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic acid of the invention.

The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to prytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
(AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the

progression of a neurological disorder, an agent that modulates a POSH function, an agent that modulates a HERPUD1 function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-associated disease in a subject. The POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated neurological disorder. The methods are useful for treating or preventing POSH-associated neurological disorder in a subject e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, schizophrenia, Niemann-Pick's disease. This sequence corresponds to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LysAspGlyLysAlaPheHisProThrTyrGluGluLysLeuLysPheValAlaLeuHis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubiquitin ligase (b). Methods using (I), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anti-apportotic agent, an anti-cancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and

Sequences AAZ87205-Z87210 represent cDNAs encoding six human neurotransmission-associated proteins (NTAPs, AAY77121-Y77126). The present sequence, clone 998868, encodes a benzodiazepine receptor-associated protein, and was produced by extension of cDNA fragments isolated from a human kidney tumour cDNA library. The NTAPs are used for treatment or prevention of neurological diseases (e.g., Alzheimer's, Parkinson's or Huntington's diseases, cerebral neoplasms, or multiple screen for specific binding agents (potential agonists and antagonists). They can also be used to raise specific antibodies and to screen for specific binding agents (potential agonists and antagonists). NTAPs, and as a source of therapeutic antagonists (antisense, triplexforming or ribozyme molecules). The nucleic acids may also be used as a source of probes and primers for diagnosis or monitoring of NTAP condition of not identifying related sequences, and for chromosome mapping and for identifying related sequences, and for gene therapy. NTAP canteagonists are used to treat and prevent a wide range of cancers and immune disorders (e.g. AlDS, asthma, Crohn's disease, osteoporosis, viral or other infections). NTAP antibodies are used to detect NTAPs, for diagnosis or monitoring, as therapeutic antagonists, in competitive drug screens, and for affinity purification of NTAPs from natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 111

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM88302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or petide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunoomodulatory activity and activity, tissue growth factor activity, immunoomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leuksemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                acids encoding polypeptides with cytokine-like activities, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            339 AAAGATGGCAAAGCATTTCATCCAACTTATGAAGAAAAATTGAAGCTTGTGGCACTGCAT

The invention relates to an isolated, purified or recombinant complex (1) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) or HERPUDI and a Ubfaultin ligase (b). Methods using (1), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptoide or POSH-AP, for identifying an antiviral agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the function, an agent that modulates a POSH function, for treating a viral infection, for inhibiting an activity of a POSH in a cell, for treating a POSH-associated disease in a subject. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated, purified or recombinant complex, useful for identifying an antiviral, anti-apoptotic or anti-cancer, comprising POSH polypeptide and POSH-associated protein (POSH-AP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŝ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated, purified or recombinant complex (I) comprising a POSH polypeptide and a POSH-associated protein (POSH-AP) (a) cor HERPUDI and a Ubiquith ligase (b). Methods using (1), (a) or (b) are useful for identifying an agent that modulates an activity of a POSH polypeptide or POSH-AP, for identifying an antiviral agent, an anticancer agent, an agent that inhibits trafficking of a protein through the secretory pathway, an agent that inhibits the progression of a neurological disorder, an agent that inhibits the progression of a neurological disorder, an agent that modulates a POSH tunction, an agent that modulates a HERPUDI function. The methods can be used for treating a viral infection, for inhibiting an activity of a POSH-associated disease is viral infection, POSH-associated cancer or POSH-associated neurological disorder. The methods are useful for treating or preventing POSH-associated neurological disorder in a subject treating or preventing POSH-associated neurological disorder in a subject creating or preventing POSH-associated neurological disorder in a subject creating or preventing POSH-associated neurological disorder in a subject creating or preventing POSH-associated neurological disorder in a subject schizophrenia neurological disease, Huntington's disease, schizophrenia neurological disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                            The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by members of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a polymeptide in the adipocyte cells, a combinant host cell expressing at least one of the interacting compound in adipocyte cells, a SID (RTM) polymeptide comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a sequences given in the specification (including its fragment or variant), a vector comprising the SID (RTM) polymucleotide, a recombinant host cell comprising the vector, a protein chip comprising the polymeptides and a recomplex, polymeptides, polymucleotides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The complex, polymelectides are useful as probes or primers. The complex is particularly useful for identifying selected interacting domains SID (RTM) and including the protein interaction, thus exhibiting the therapeutic effect. The present sequence encodes a SID (ATM) and a such as obesity or diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidaring cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the coding sequence for a human secreted protein. It was isolated from an adult pancreas cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopoiesis regulators (treating myelolo or lymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic activity, or anti-

                                                                                                                                                                                                   GluGluGluAsnValThrCysGluGluLysAlaLysLysAsn------AlaAsn 407
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher elekaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention

discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

/done="Organ: brain; Vector: pBluescript II KS(+); Site_l:
KCORI; Site_2: Notl; This normalized library was
CONSTRUCTED from 1 million independent clones. CDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the

Patent No. 6703491
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PATENTI VET: 2.0
